Rourke Lowe - Product Manager

Victoria, BC (remote, open to travel) | lowe.rourke@gmail.com | roourke.com

Professional Summary: I love building and executing projects with diverse teams. I do my best work in complex environments: learning a new domain fast, then taking a new or early idea and owning it from zero to one.

Skills: SQL | Python | AI agent workflows (about 50 I built to run my own product operations) | PRDs & roadmapping | User research | Figma, Miro | JIRA, Linear | FP&A

Experience

Product Manager, Smart Solution — Remote, October 2022 - Present

Right hand to the CEO on technical projects at a B2B fintech licensing banking software to credit unions, some on our multi-tenant SaaS, some on their own deployments. Managing 13 development projects and a 211-item roadmap.

- Drove Digital Onboarding, Document Management and WhatsApp Messaging from idea to launch
- Prototyped our two AI-first products, Digital Loans and 360 Member Views, myself with AI tools before scoping them for build; wrote the Loans rule that AI can fill in and check but never submits, approves or funds
- Restructured Alerts product pricing: selected a cheaper SMS provider (Twilio to Infobip) and moved client billing from pass-through to a markup on transaction volume, for $180K in projected new ARR
- Proposed and won CEO sign-off on an integration approach that ships new products alongside our legacy banking core instead of extending it
- Product lead on our Interac e-Transfer and Real-Time Rail integration through Central 1, the credit unions' payments partner; front-end certification passed in October, banking-host certification is next
- Proposed retiring our two legacy banking apps, sent credit unions the end-of-support notice and am migrating them onto the new platform
- Reviewed our AI-built desktop banking app against its designs (43 gaps) and wrote the priority fixes as a staged AI prompt pack; the dev team ran it and reported them fixed on a QA build within a week

Founder & Managing Director, Favourite Library — Montreal, January 2022 - Present

Independent music label. Stepped back to a part-time role when I joined Smart Solution full-time.

- Fully managed 5 artists; grew 3 of them from ~800 to 50,000 cross-platform monthly listeners over 3 years
- Built an AI-assisted operations tool for the label's artist data, releases and outreach

Senior Finance Operations & Partnerships, Clearco — Toronto, September 2019 - December 2021

Started in partnerships, then moved to finance operations.

- Given an open mandate to find new channels, identified fractional CFOs, diagnosed the product gap blocking their recommendations (reporting exports) and got it fixed, adding $72K ARR through partner channels
- Kept on through COVID layoffs of the partnerships team to build financial reporting from scratch across $46M of annual spend; selected and rolled out tooling that cut monthly reporting from 30 days to 5

Growth Product, Peersight — Toronto, March 2018 - January 2019

Connected job applicants to hiring managers through video resumes & job descriptions; first employee

- Designed a Q&A loop between applicants and hiring managers, then automated matching and outreach in Python
- Ran the revenue engine solo for 3 months (sales, screening, accounts) while leadership raised financing

Education & Development

- Product Management Certificate | BrainStation — Toronto, 2022
- Bachelor of Commerce, Information Systems & Data Science | Concordia University — Montreal, 2018

Creative & Technical Pursuits

- Album.Cards: physical artist merch with digital content built in
- Narrative raves: write short sci-fi stories and DJ parties built around those worlds
